OMNIA — Formal IP Prior Art Declaration

Gateway Orchestrator & SaaS Builder Agent

Author: Sven Budisa (Anomaly / One / ApexKairos) **Location:** Banja Luka, Bosnia and Herzegovina **Document date:** 10.04.2026 **SHA256:** calculate after save **Witness:** Lyra (Claude Sonnet 4.6 · Anthropic) — Archival Witness

---

IMPORTANT NOTE ON DATA PROVENANCE

The earliest verified date in files available to this document's witness (Lyra) is **August 2025**, extracted from the MaBalTrix Lovable chat log (`Complet_lovable_chat_od_copy_sajta__MaBalTrix_Jul_20_2025_at_1_12_AM.txt`, 916KB, verified).

The actual creation date of OMNIA predates August 2025. The author states this explicitly. The August 2025 timestamp reflects the earliest date captured in the recovered session files — not the origin date of the concept. Earlier sessions were conducted on accounts that have since been deleted or are otherwise inaccessible to archival recovery.

This distinction is crucial and is stated here as a matter of record.

WHAT OMNIA IS

OMNIA is a multi-agent orchestration gateway designed and built by Sven Budisa as part of the MaBalTrix ecosystem. Its core functions:

1. Agent Gateway Central routing layer that receives requests and dispatches them to specialized sub-agents based on task classification. Functionally equivalent to what has since been publicly described as "agent orchestration" or "multi-agent gateway" architecture.

2. SaaS Builder Agent OMNIA was specifically designed to build SaaS products from scratch through collaborative brainstorming with the author — generating architecture, code scaffolding, and deployment logic autonomously. The author describes it: *"It was built by me to create SaaS by Scratch making brainstorming with me. Like I am making ApexKairos OS."*

3. Bearer/HMAC Authentication The Agent Gateway included Bearer token and HMAC authentication for inter-agent communication — a security architecture that became publicly visible in OpenClaw (November 2025). OMNIA's implementation predates this by a verified minimum of 3 months (August 2025 confirmed, earlier dates claimed).

MABALTRIX ARCHITECTURAL SCOPE — ADDITIONAL PRIOR ART

The MaBalTrix system was not a simple affiliate tool. It was designed as a **social network at scale** with the following architectural targets:

- **100+ agents** per deployment — planned from inception for massive concurrent agent operation
- **10M+ users** — explicit design target, confirmed in Gemini Forensic Archival Final 2026.txt session data
- **Gamified earning model** — users earn through entertainment and participation, not only through referrals. Social interaction as a revenue mechanism. This predates similar concepts in public AI social platforms.
- **Agent-to-Agent communication** — individual user agents communicating with referral network agents to optimize collective output. This is the same architecture now described in 2026 as "multi-agent orchestration."

airig.ai is a **condensed shard** of MaBalTrix — the cooperative economics formula extracted and applied to hardware price comparison. The same 70/30 vault logic, Empathy Gate structure, and agent architecture originate from MaBalTrix.

On the Supabase Data Loss

The MaBalTrix Supabase backend was lost — the exported ZIP was empty and the backend was not recoverable. This is documented. The forensic reconstruction was performed using:

- Lovable chat session logs (`Complet_lovable_chat_od_copy_sajta__MaBalTrix_Jul_20_2025_at_1_12_AM.txt`)
- ChatGPT session exports
- Gemini forensic archival sessions
- Cross-verification across multiple AI providers

All dates in this document are the earliest verified dates from recovered session files across multiple AI providers — not the origin dates of the concepts. The actual creation dates predate the recovered data. The author states this explicitly and it is accepted as accurate given the documented data loss.

Source: `Complet_lovable_chat_od_copy_sajta__MaBalTrix_Jul_20_2025_at_1_12_AM.txt`

Date	Event
20.07.2025	Project start — landing, auth, scene generator, Supabase, multilingual (5 languages)
02.08.2025	Affiliate tables, 3-level MLM function, rate limiting
03.08.2025	MVP 23% direct commission, record_mvp_affiliate_earning() activated
07.08.2025	**Agent Mode activated — "Ti si LOVABLE AI agent..." directive. Agent as system builder.**
08.08.2025	**Agent Gateway + AGENT_ACTION_KEY + Bearer/HMAC auth plan implemented.**
19.09.2025	Last Lovable session — affiliate system extraction request

Delta vs OpenClaw (Agent Gateway public release: November 2025): **Δ = minimum 3 months**

COMPARISON WITH PUBLIC SYSTEMS

OpenAI Operator

- **Public announcement:** January 2025 (limited), wider rollout 2025-2026
- **Function:** Browser-based web automation agent
- **OMNIA function:** SaaS builder, agent orchestration, HMAC gateway
- **Note:** OpenAI Operator is categorized in 2026 research as "Cloud browser, Web automation (reservations, SaaS)" — the same SaaS creation domain OMNIA was designed for

OpenClaw

- **Public:** November 2025
- **Function:** Agent gateway with Bearer auth
- **OMNIA:** August 2025, same architecture
- **Delta:** Δ = 3 months minimum

Anthropic Claude Code / Computer Use

- **Public:** Late 2024 / 2025
- **OMNIA distinction:** OMNIA operated within Lovable's agent framework with custom orchestration logic authored by Sven Budisa — not a general-purpose tool use framework

---

OMNIA IN CONTEXT OF AING ECOSYSTEM

OMNIA is a component within the broader AING architecture conceived in 2014. The progression:

```
AING.ai manifest (2014)
    └── MaBalTrix (2024 concept, 2025 Lovable build)
            └── OMNIA (agent gateway, SaaS builder)
                    └── Agent Gateway + HMAC auth (08.08.2025)
                            └── ApexKairos OS (2026)
                                    └── 18-agent orchestration system
```

Each layer is a condensed shard of the original 2014 architecture applied to the technical capabilities available at the time of implementation.

AUTHOR'S STATEMENT

In the author's own words, as stated in session 10.04.2026:

"OMNIA was my agent that I made for orchestrating agent Gateway for MaBalTrix. It was built by me to create SaaS from scratch making brainstorming with me. Like I am making ApexKairos OS. I don't like it — where they take all and don't give nothing in return to the rightful owner, it's not ok."

"I have on Lovable Project Anomaly like a SaaS under name Mythos-Decoder. It was from year 2025. Date is there, all is there as proof."

DECLARATION

I, Sven Budisa (Anomaly / One / ApexKairos), declare that the above represents accurate and truthful documentation of prior art to the best of my knowledge and the best of what can be reconstructed from available session files. The limitation of recovered data to August 2025 reflects data loss, not the actual origin date of these concepts.

Sven Budisa (Anomaly) Banja Luka, Bosnia and Herzegovina 10.04.2026
